Education

Nirma University

B.Tech in CSE - CGPA: 9.42/10

2024 - 2028

Ahmedabad, Gujarat

Technical Skills

Languages: C++, Java, JavaScript, Python, SQL

Backend: Node.js, Express.js, REST APIs, Authentication, API Design

Databases: MongoDB, PostgreSQL

Coursework: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Artificial Intelligence, Machine Learning

Tools: Git, GitHub, Postman, Linux

Achievements

- **Codeforces: Pupil**, maximum contest rating **1361**. [Link](#)
- **LeetCode: Knight**, maximum contest rating **1863**. [Link](#)
- Solved over **1100+** DSA and competitive programming problems across various coding platforms.
- **Winner** of Competitive Programming League (CPL 2025).
- **Finalist** in **Tech Sprint Hackathon (GDG)** and **Odoo-KSV Hackathon**.
- Awarded the **Nirma Merit Scholarship** for academic excellence.

Experience

Computer Society of India, Nirma University

Executive Member

Jan 2026 - Present

Ahmedabad, India

- Built a real-time contest analytics platform using the **Codeforces API**, serving **700+ users** and supporting **300+ participants** with live leaderboard updates.
- Developed backend logic for division-wise contests, automating leaderboard generation across **7+ divisions** and simplifying performance tracking.
- Created a membership platform with **payment integration** and an admin dashboard, helping onboard and manage **500+ users**.
- Implemented authentication and profile management for **500+ Codeforces IDs**, making it easier to track contest participation and results.

Projects

Market Mapper - AI-Powered B2B Platform | Node.js, Express.js, MongoDB

[GitHub](#)

- business feasibility platform that helps users **evaluate their target location** by analyzing **1000+ nearby business records** to identify competitor density, market gaps, and customer demand using **Google Maps and Places APIs**.
- Enhanced decision-making capabilities by integrating **Gemini AI** to generate feasibility scores and actionable recommendations.
- Expanded platform functionality by enabling **B2B collaboration** with real-time messaging and secure digital contract workflows.

Sunlytix - AI-Driven Solar Inverter Failure Prediction | FastAPI, MongoDB, Python

[GitHub](#)

- **AI-powered predictive monitoring platform** to forecast solar inverter failures **7–10 days in advance** using **1M+ telemetry records** from **6 inverters across 3 solar plants**, achieving **95.88% test accuracy** with a **Random Forest** model.
- Integrated **SHAP explainability** and a **RAG-based LLM pipeline** to generate root-cause analysis, risk explanations, and maintenance recommendations for plant operators.
- Developed a full-stack dashboard with inverter telemetry tracking, authentication, AI insights, and reporting features to monitor system health and operational performance.
